

## We Speak Pink: A Breast Health Panel For Women by Women

It's no secret that, as one of the most common cancers in women in the U.S., breast cancer is something all women should monitor their risk for. About 1 in 8 U.S. women will develop invasive breast cancer over the course of her lifetime. And this year alone, 268,600 new cases of intensive breast cancer are expected to be diagnosed.

Join us for a FREE panel discussion to get the facts about breast cancer, including prevention, screening and treatment.

### Our experts will discuss:

- Risk factors for breast cancer
- Latest diagnostic and treatment options
- Screening options and guidelines
- Recent studies about breast cancer prevention
- How to integrate wellness into treatment
- Financial considerations for treatment and care

In honor of the 35th Anniversary of Breast Cancer Awareness Month, program attendees will be entered into a raffle to win a HydraFacial MD® from our Laser and Medi-Spa.

**Wednesday, October 7  
5 - 6pm**

*Registration required. This program will take place via Zoom. A link to enter the program will be sent prior to the program.*
